

1st method: iframe

Example page: \api\nv_api_form\iForm.html

You can gran the same code directly from your admin panel. Insert this snippet into the page where you want to load your form.

```
<iframe src="http://www.yourdomain.com/mailer/subscriber/iForm.php?idForm=48" style="width: 700px;height: 400px"></iframe>
```

2nd method: load the form with a \$get and append it to an existing container

Example page: \api\nv_api_form\form.html

In the <head> part of the page where you want to load the form add the following <script> block.

```
<script language="JavaScript" type="text/javascript">
var url="http://www.yourdomain.com/mailer/";
var idForm=49;
document.write('<script type="text/javascript" src="'+url+'admin/scripts/form.js"></script>');
</script>
```

This line loads the form in your web page.

```
<div id="holderDiv"></div>
```

For both methods

Replace the **yellow parts** with your own actual URL to your nuevoMailer installation and with the **form ID** that you want to embed.

Note:

Normally, for security reasons it works only for requests coming from the same domain or sub-domain. For cross-domain requests open the files:

- subscriber/iForm.php (1st method)
- subscriber/loadForm.php (2nd method)

Enable the line that defines the external domain. You will see comments at the top of each file.

```
header("Access-Control-Allow-Origin: http://www.external-url.com");
```
